

# Creating Text Nodes

- To create text nodes, you can use the `document.createTextNode` method.
- This method creates a text node that we can insert into the document to make it show up on the screen.
- This example replaces all images (`<img>` tags) in the document with the text held in their alt attributes, which specifies an alternative textual representation of the image.
- This involves not only removing the images but adding a new text node to replace them.

```
<p>The  in the  
.</p>  
  
<p><button onclick="replaceImages()">Replace</button></p>  
  
<script>  
  function replaceImages() {  
    let images = document.getElementsByTagName("img");  
    for (let i = images.length - 1; i >= 0; i--) {  
      let image = images[i];  
      if (image.alt) {  
        let text = document.createTextNode(image.alt);  
        image.parentNode.replaceChild(text, image);  
      }  
    }  
  }  
</script>
```
